

CREDENTIAL & SCOPE AUTHORIZATION

Right credential, right qualification, still valid — checked before the work starts.

FIELDCOMM

FC-FORM-009 · Rev 1.0

An unexpired card is not the same as authorization. Check the credential against what this specific scope requires (for welding: process, position, material and thickness range), confirm it is current for the whole duration of the work, and record who verified it. If it doesn't match, the work does not start.
